ABSTRACT OF THE DISCLOSURE

A kitchen utensil designed specifically to cut and chop cabbage comprising a cylindrical hollow body with a closed top and an open bottom connected by a cylindrical wall. The closed top has a permanently affixed handgrip that covers the top and extends slightly over onto the wall of the device. The open bottom rim of the device is filed or rubbed down to a smooth, thin, sharp, cutting and chopping edge that can be sharpened if it should become dulled from extensive use. The device has a removable protective cover for the cutting and chopping edge that serves as a shield from injury, and protects the cutting and chopping edge from becoming damaged when the cabbage cutter is not in use.
